

CIMENTO SHORT GUIDELINES

Preparing the manuscripts:

Manuscripts must be prepared using the SIF package for Nuovo Cimento and according to the “Style Guide”, which can be downloaded from

<http://en.sif.it/journals/ncc> .

For your convenience, we summarized herewith the most important items of the extended style guide that you must follow in preparing your manuscript.

a) Author(s) name(s) and affiliation(s):

First names of authors may be abbreviated or written in full.

Affiliations must be indicated for each author and must contain at least:

- name of institution;
- city;
- country (in English).

b) Summary:

The summary, not exceeding 200 words, must be written in one paragraph, preferably self-consistent (no figure, table, equation or reference quotations) resuming concisely the aim of your paper.

c) Main body of the paper:

The words “section(s), equation(s), figure(s), reference(s)” should be abbreviated as “sect(s)., eq(s)., fig(s)., ref(s).”.

Latin expressions as *e.g.*, *i.e.*, *et al.*, *versus* should be set in italic.

Chemical formulas, units of measurement and acronyms must be set in roman.

Figures, tables and references must be all quoted and numbered consecutively.

d) Figures: Keep special attention to quote all figures, in the right numerical order, and if you use (a), (b), etc., to identify different parts of a figure in the text and caption, make sure that (a), (b), etc., do appear in the figure itself, (otherwise, notations like: left, right or top, bottom are a better choice).

To ensure printability of your figures there are a few rules you should stick strictly to:

- To create the .eps file carefully follow the instruction listed in the *Figures* section of the extended style guide.
- Figure files should not exceed 10 MB in size each.

e) References:

Literature citation of periodicals [1–3], books [4], proceedings [5] and preprints [6] must be organized according to the following examples. Note that journal names should be abbreviated according to the list of serial title word abbreviation of the ISDS (International Serial Data System) if available, otherwise full journal names are preferable.

1. SMITH J. M., *Eur. Phys. J. Plus*, **130** (2015) 16.
2. SMITH J. M. *et al.*, *Eur. Phys. J. A*, **51** (2015) 33.
3. SMITH J. M. *et al.*, to be published in *Nuovo Cimento C*.
4. SMITH J. M., *Molecular Dynamics*, 2nd edition (Springer, Berlin, Heidelberg) 1987.
5. SMITH J. M., *Proceedings of the IWM-EC2014 International Workshop on Multi facets of EoS and Clustering, Catania (Italy), 6-9 May 2014*, edited by BORDERIE E., BOUGAULT R., PAGANO A., PIRRONE S. and POLITI G., Vol. **108** (SIF, Bologna) 2015.
6. SMITH J. M. *et al.*, CERN-ACC-2015-030 (2015).

(If available, the DOI (Digital Object Identifier) or the arXiv code of the literature may be added at the end of the reference.)

Cross-references to papers belonging to the conference must be quoted in the bibliography as follows:

7. Smith J. M., these proceedings.

Preparing the files:

- Use “lower case” names only for your file names.
- For the .eps of figures add a list of file names (always in lower case) if different than fig01, fig02, etc.
- Avoid including non-necessary files as .log, .aux, etc.
- Note moreover that the .tex file name should be exactly the same as the directory that contains it.
- Make a compressed archive of your files, including a .pdf which has to exactly match the source file.
