

107° CONGRESSO NAZIONALE della SOCIETÀ ITALIANA DI FISICA

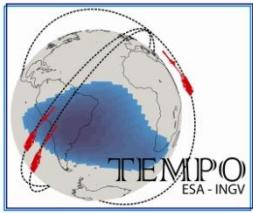

Geomagnetic jerks and South Atlantic Anomaly: a link during satellite era

**Saioa A. Campuzano, A. De Santis, F. J. Pavón-Carrasco,
A. González-López, E. Qamili**

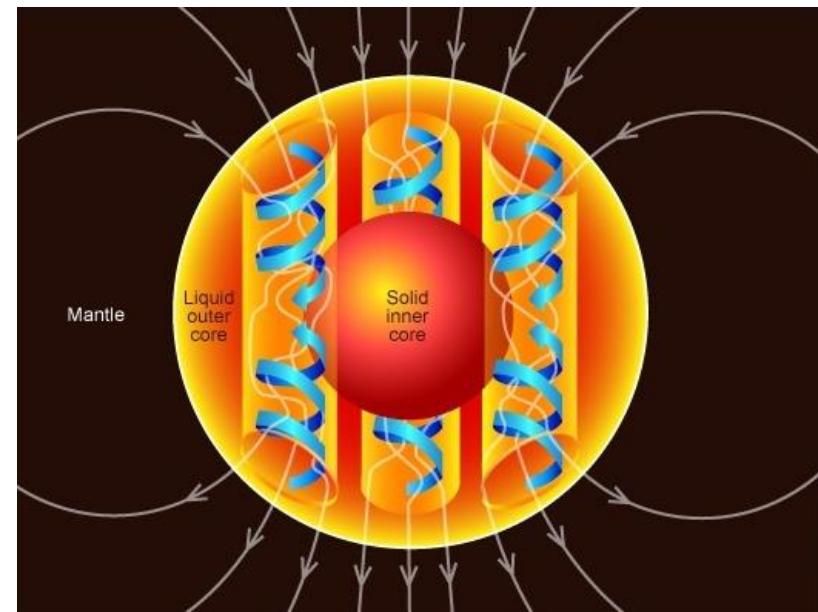

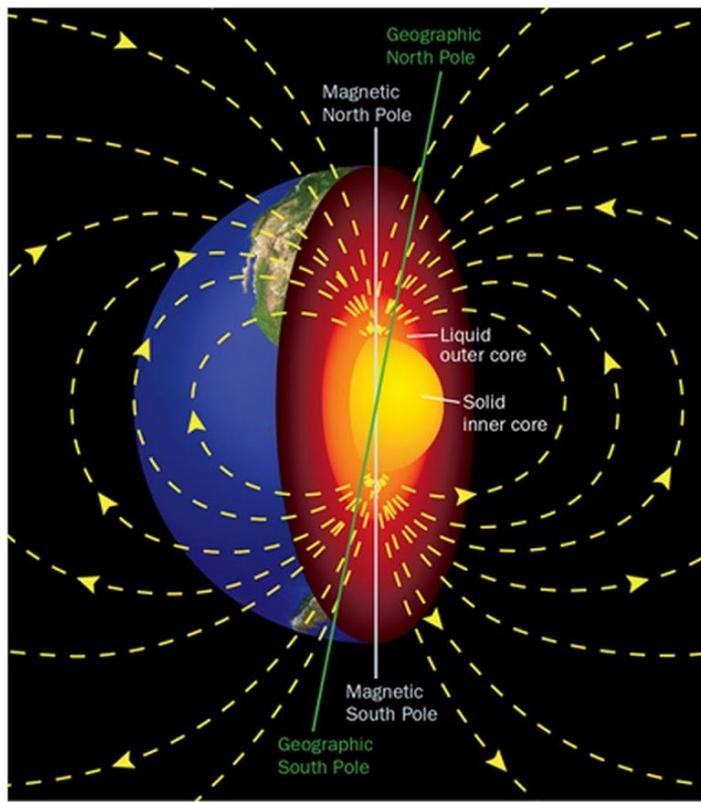

ISTITUTO NAZIONALE
DI GEOFISICA E VULCANOLOGIA

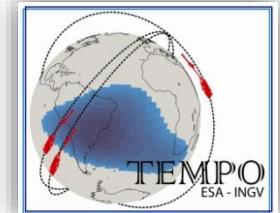

1. Internal geomagnetic field

Earth's magnetic field is mainly of internal origin and dipolar. It is generated due to electric currents in movement in the liquid outer core. The geomagnetic field changes on different time scales. Changes on a time scale of a year or more are named *secular variation*, being generally smooth.

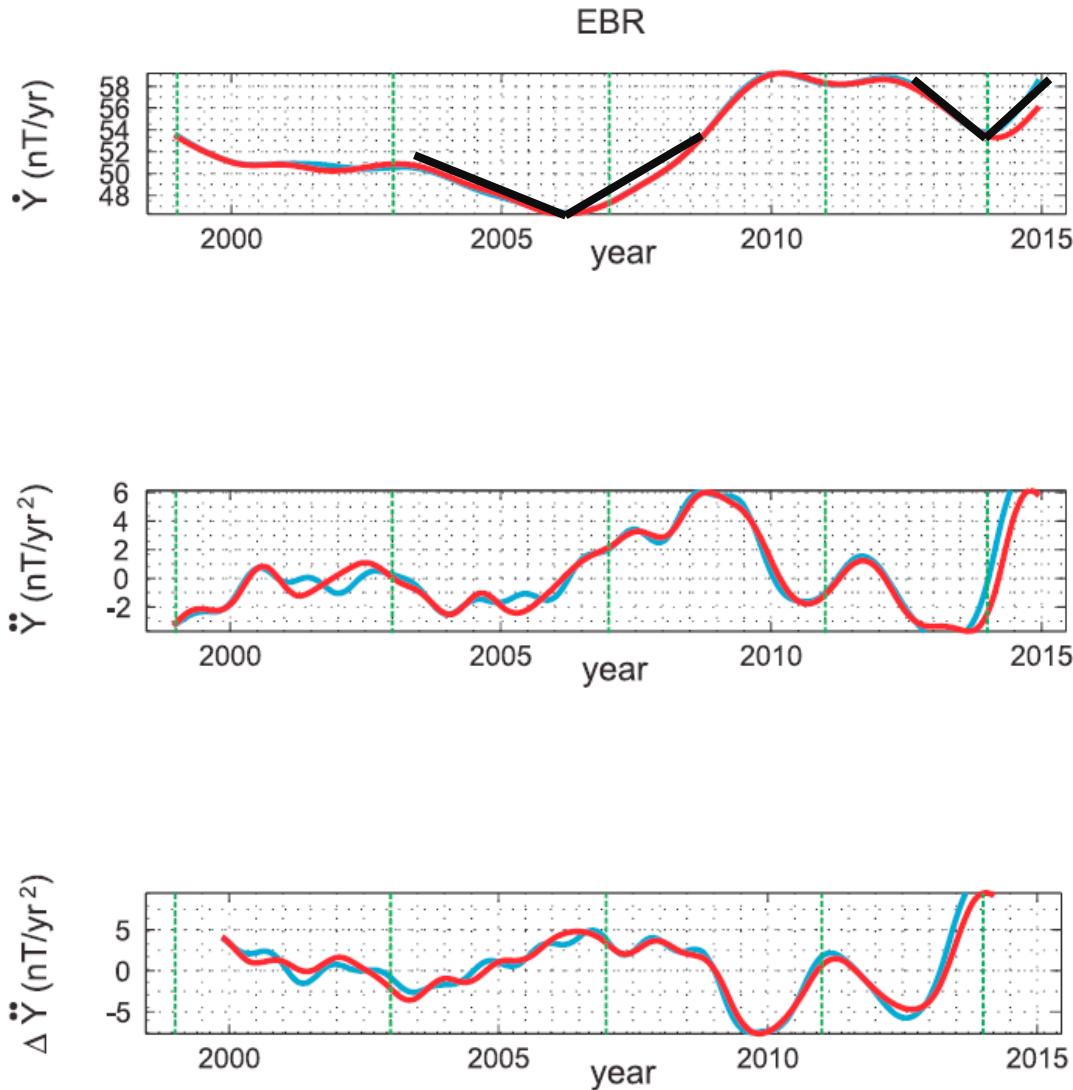

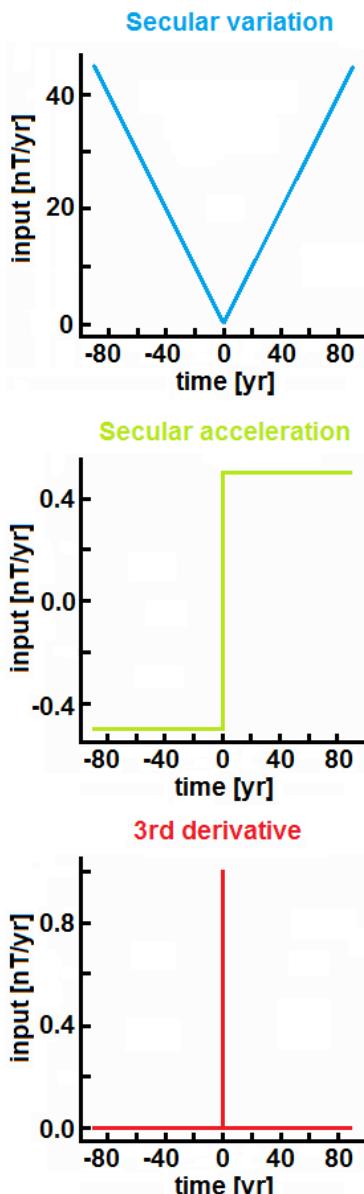

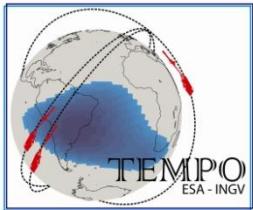

SIF 13th-17th September 2021

2. Geomagnetic jerks at surface

SIF 13th-17th September 2021

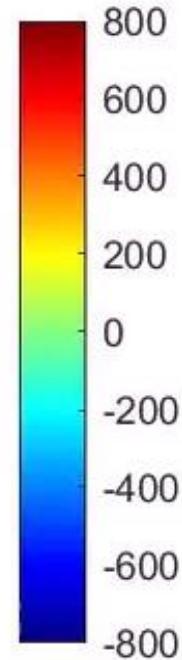

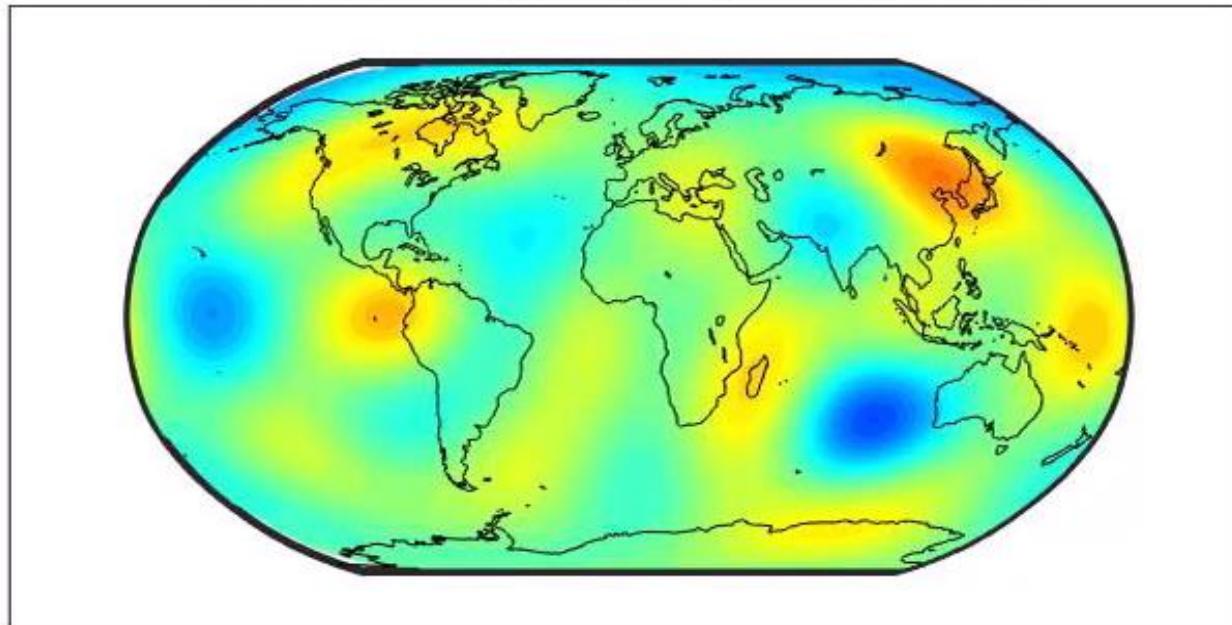

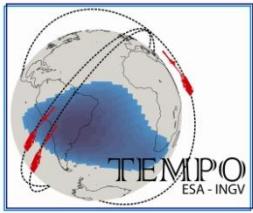

2. Geomagnetic jerks at core-mantle boundary (CMB)

Secular acceleration of the radial component (Br) of the geomagnetic field at core-mantle boundary (CMB) for the last two decades.

SA of Br (nT/yr²) at 1/1999

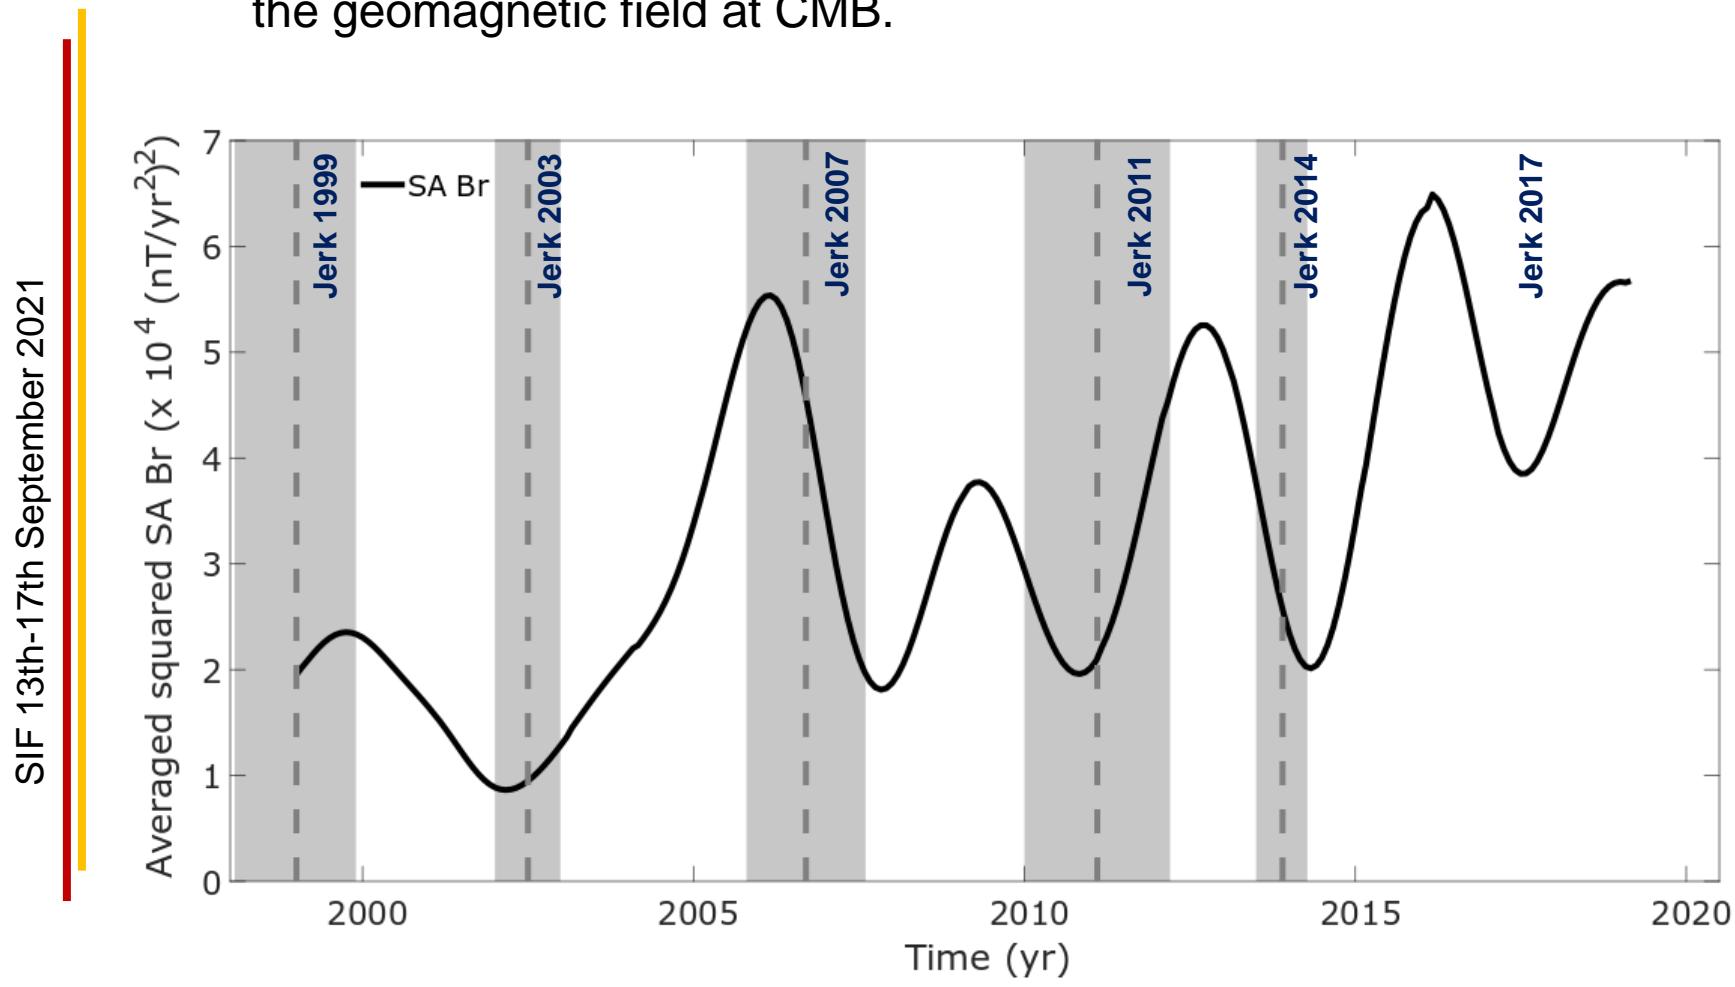

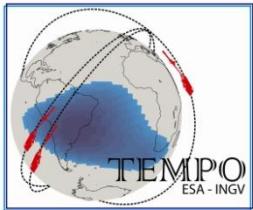

SIF 13th-17th September 2021

2. Geomagnetic jerks at core-mantle boundary (CMB)

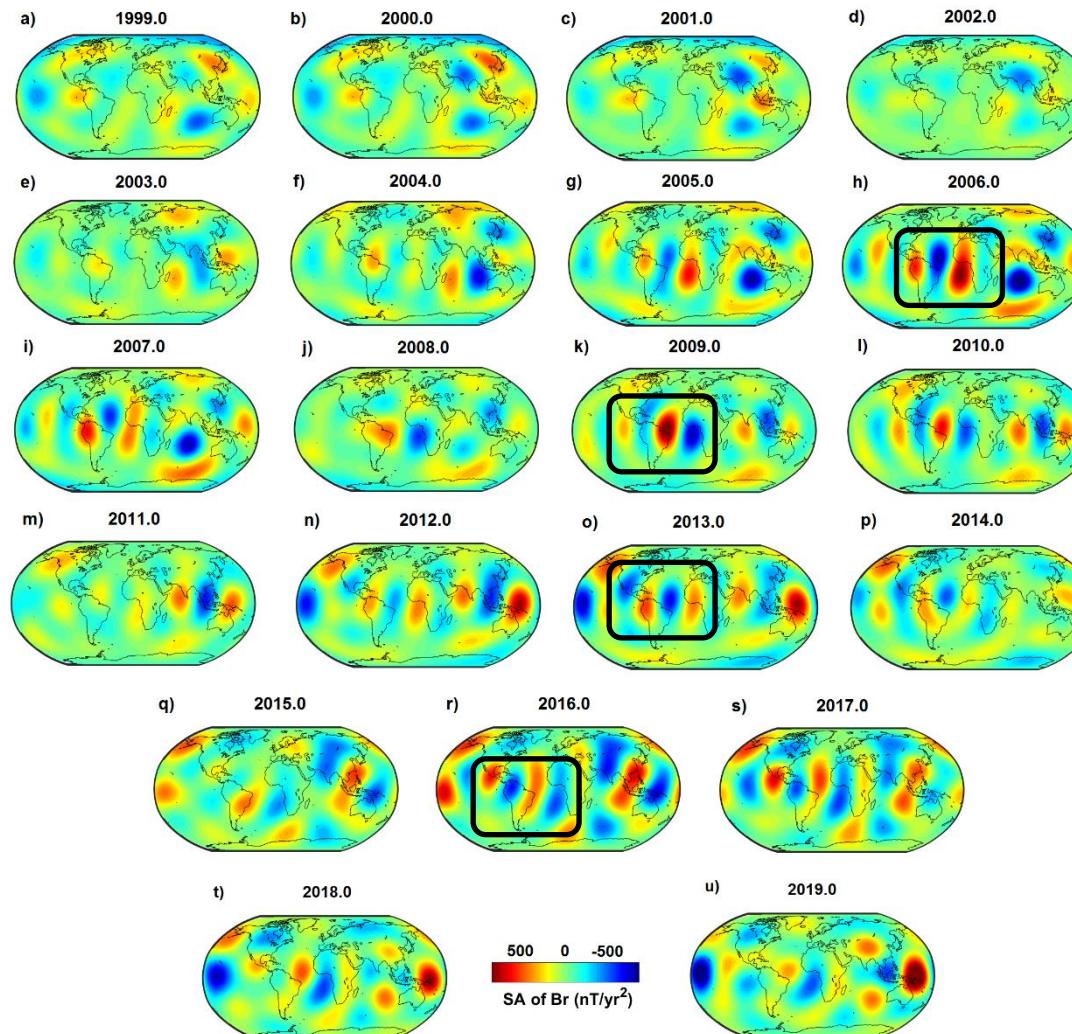

Squared secular acceleration power of the radial component of the geomagnetic field at CMB.

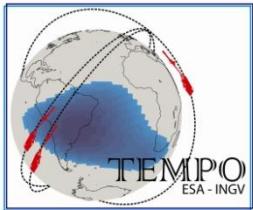

2. Geomagnetic jerks at core-mantle boundary (CMB)

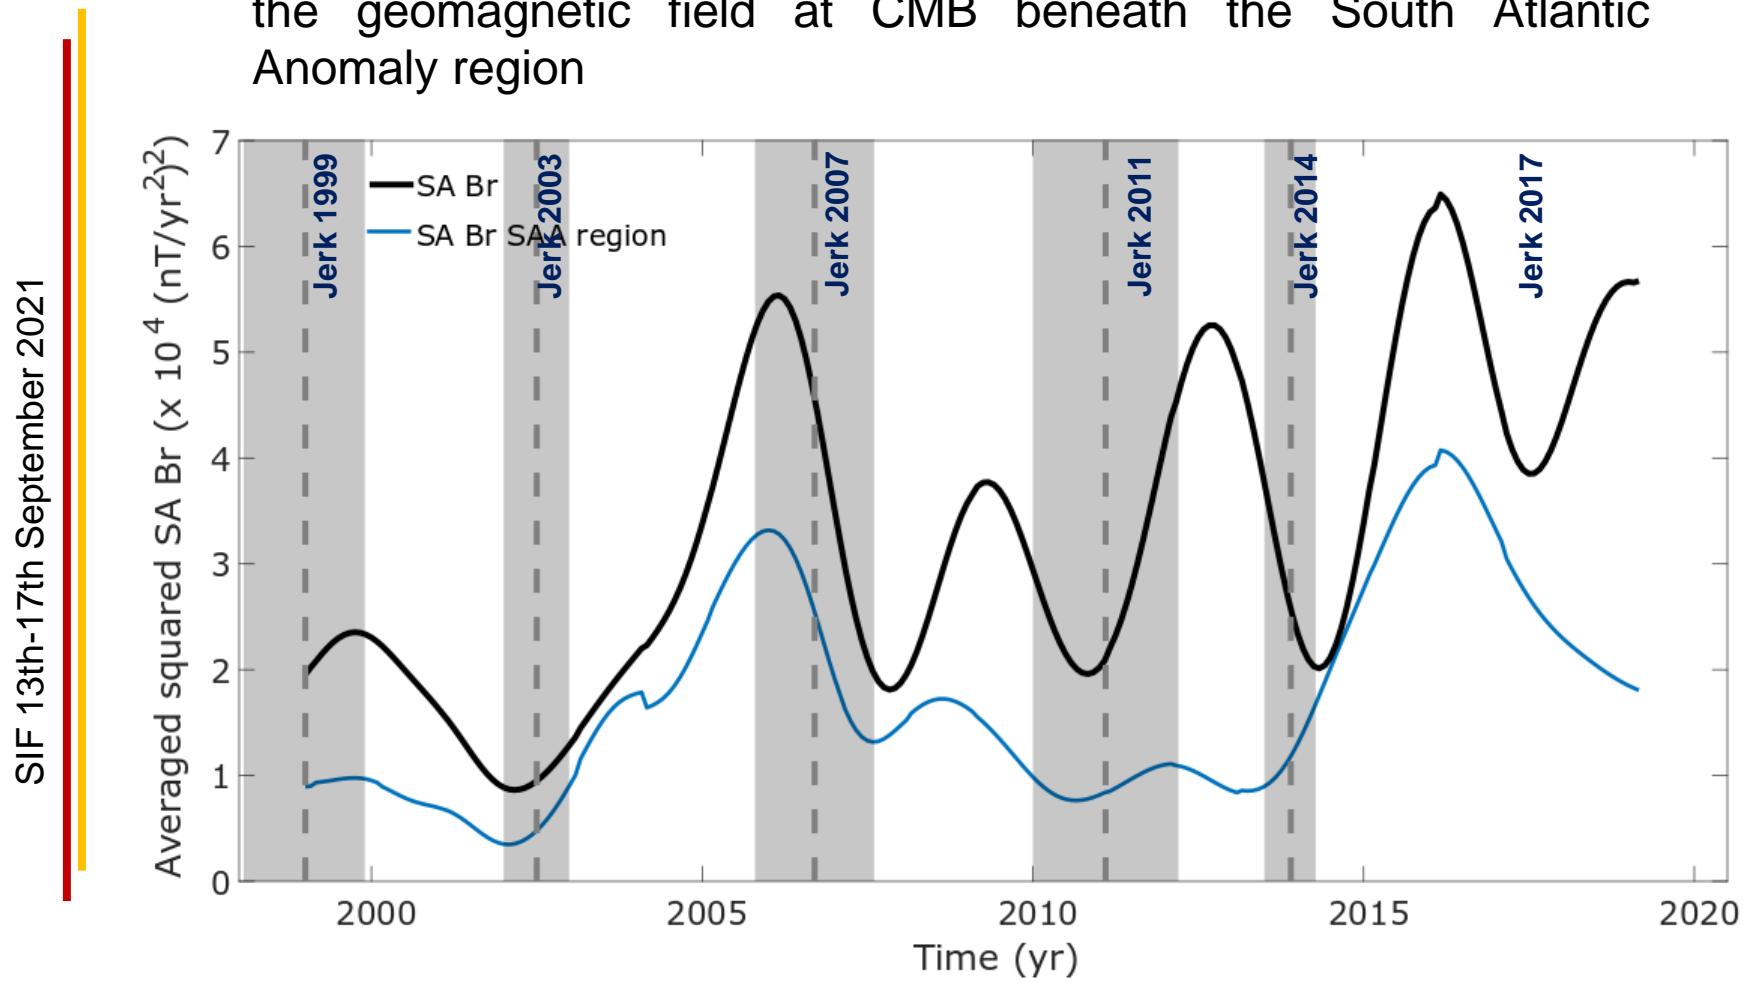

Maps of the secular acceleration of the radial component of the geomagnetic field at CMB (every year)

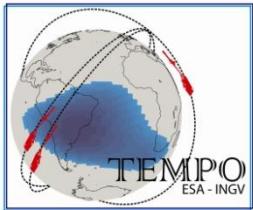

2. Geomagnetic jerks at core-mantle boundary (CMB)

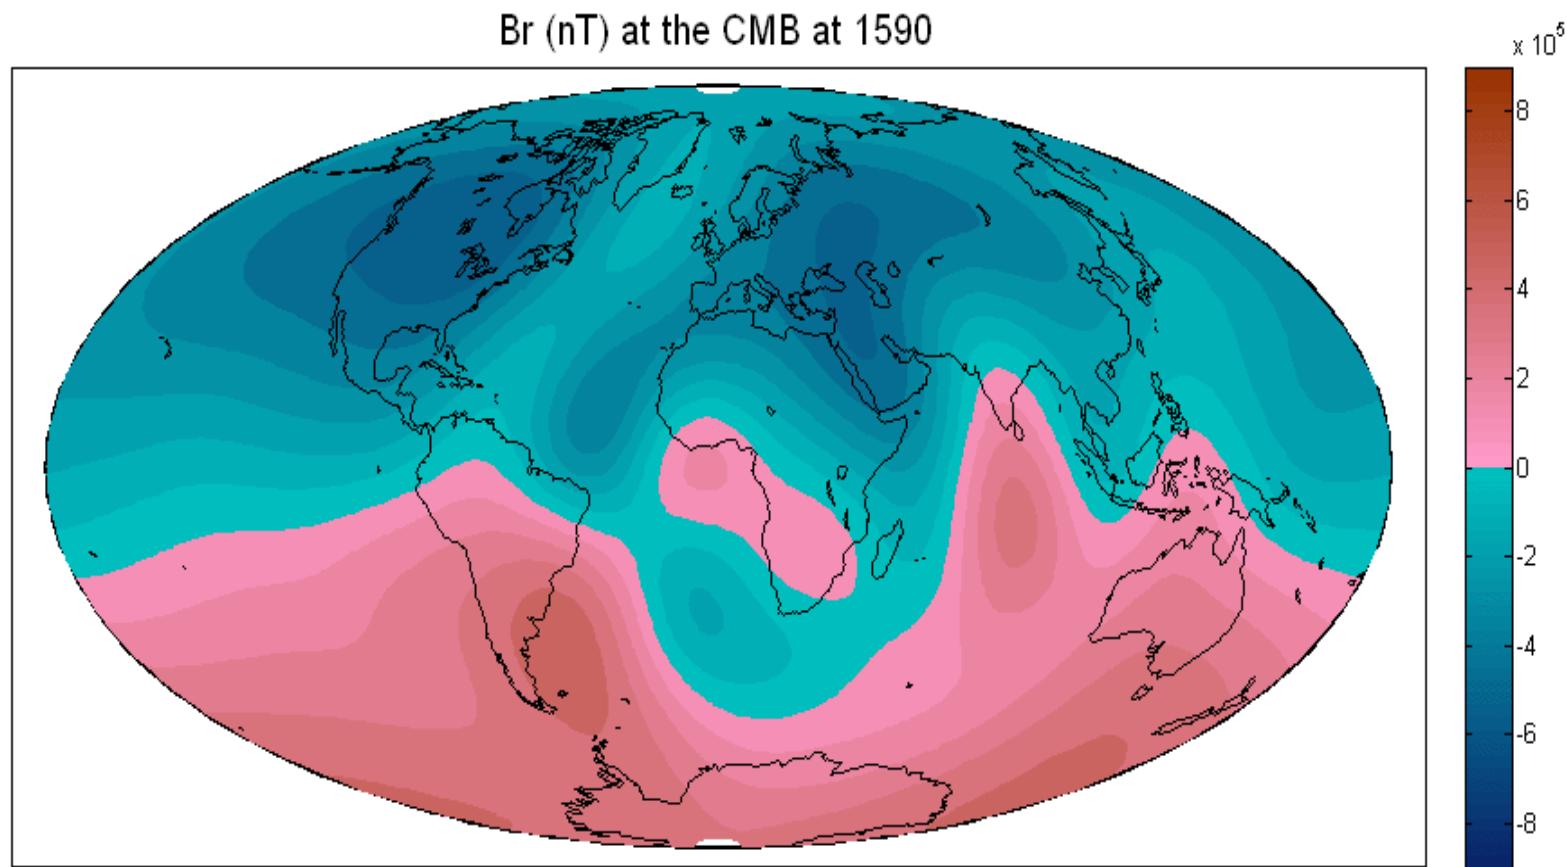

Squared secular acceleration power of the radial component of the geomagnetic field at CMB beneath the South Atlantic Anomaly region

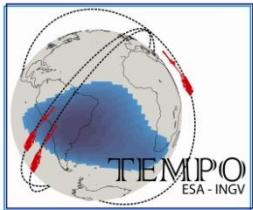

3. South Atlantic Anomaly (SAA) at CMB

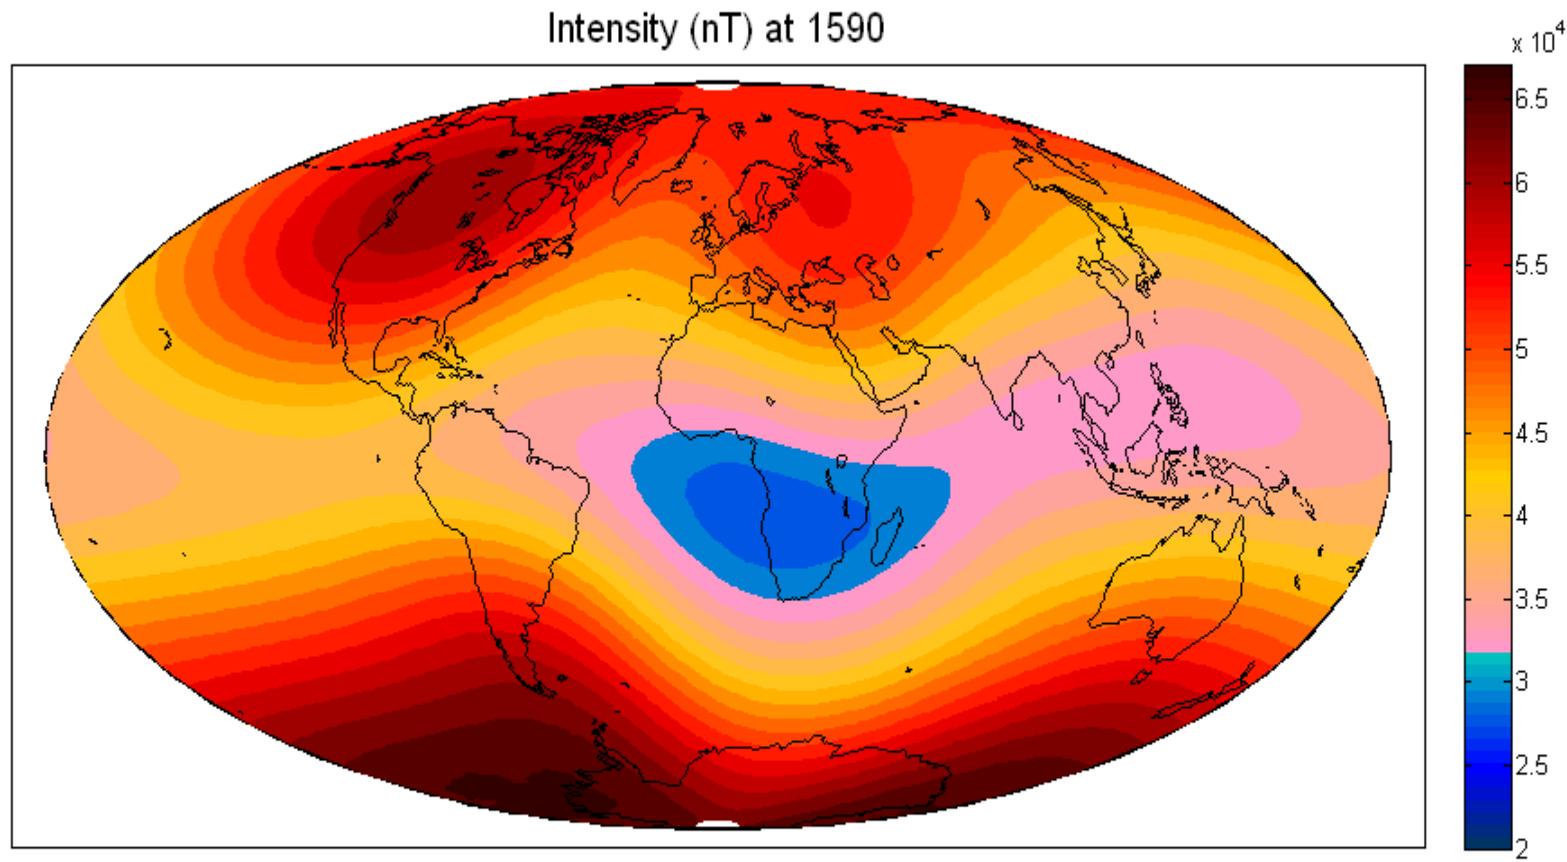

Time evolution maps of the radial component of the geomagnetic field at CMB from 1590 until now (every 5 years): reversal flux patches (RFPs).

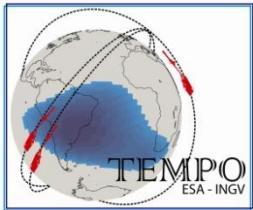

3. South Atlantic Anomaly (SAA) at surface

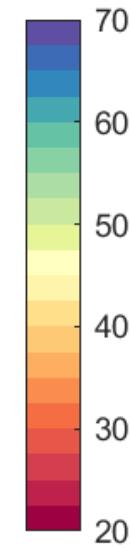

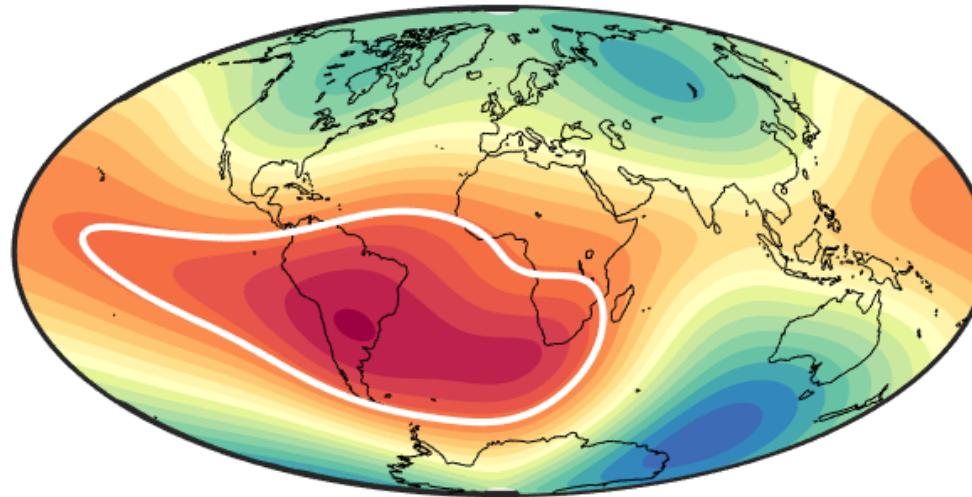

Time evolution maps of the geomagnetic field intensity at Earth's surface from 1590 until now (every 5 years). The SAA extent area is given by the isoline of 32000 nT.

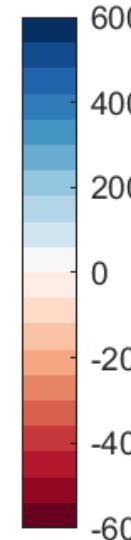

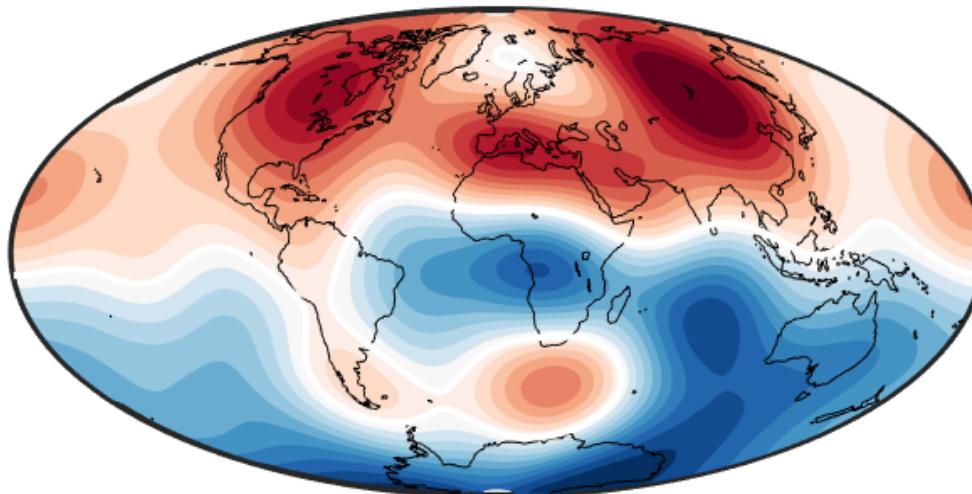

3. South Atlantic Anomaly (SAA) in 2020

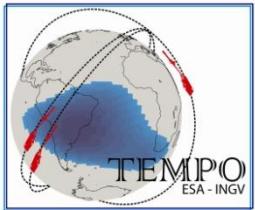

Intensity (μT)

SIF 13th-17th September 2021

$\text{Br} (\mu\text{T})$ at CMB

4. Swarm mission (ESA)

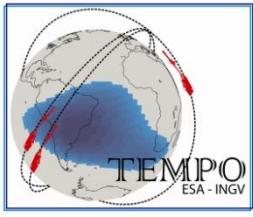

- 3 identical satellites (Alpha, Bravo, Charlie).
- Data from 26 Nov, 2013.
- Alpha and Charlie fly at 460 km of altitude.
- Bravo at 510 km of altitude.

Swarm (ESA, 2013 – now)

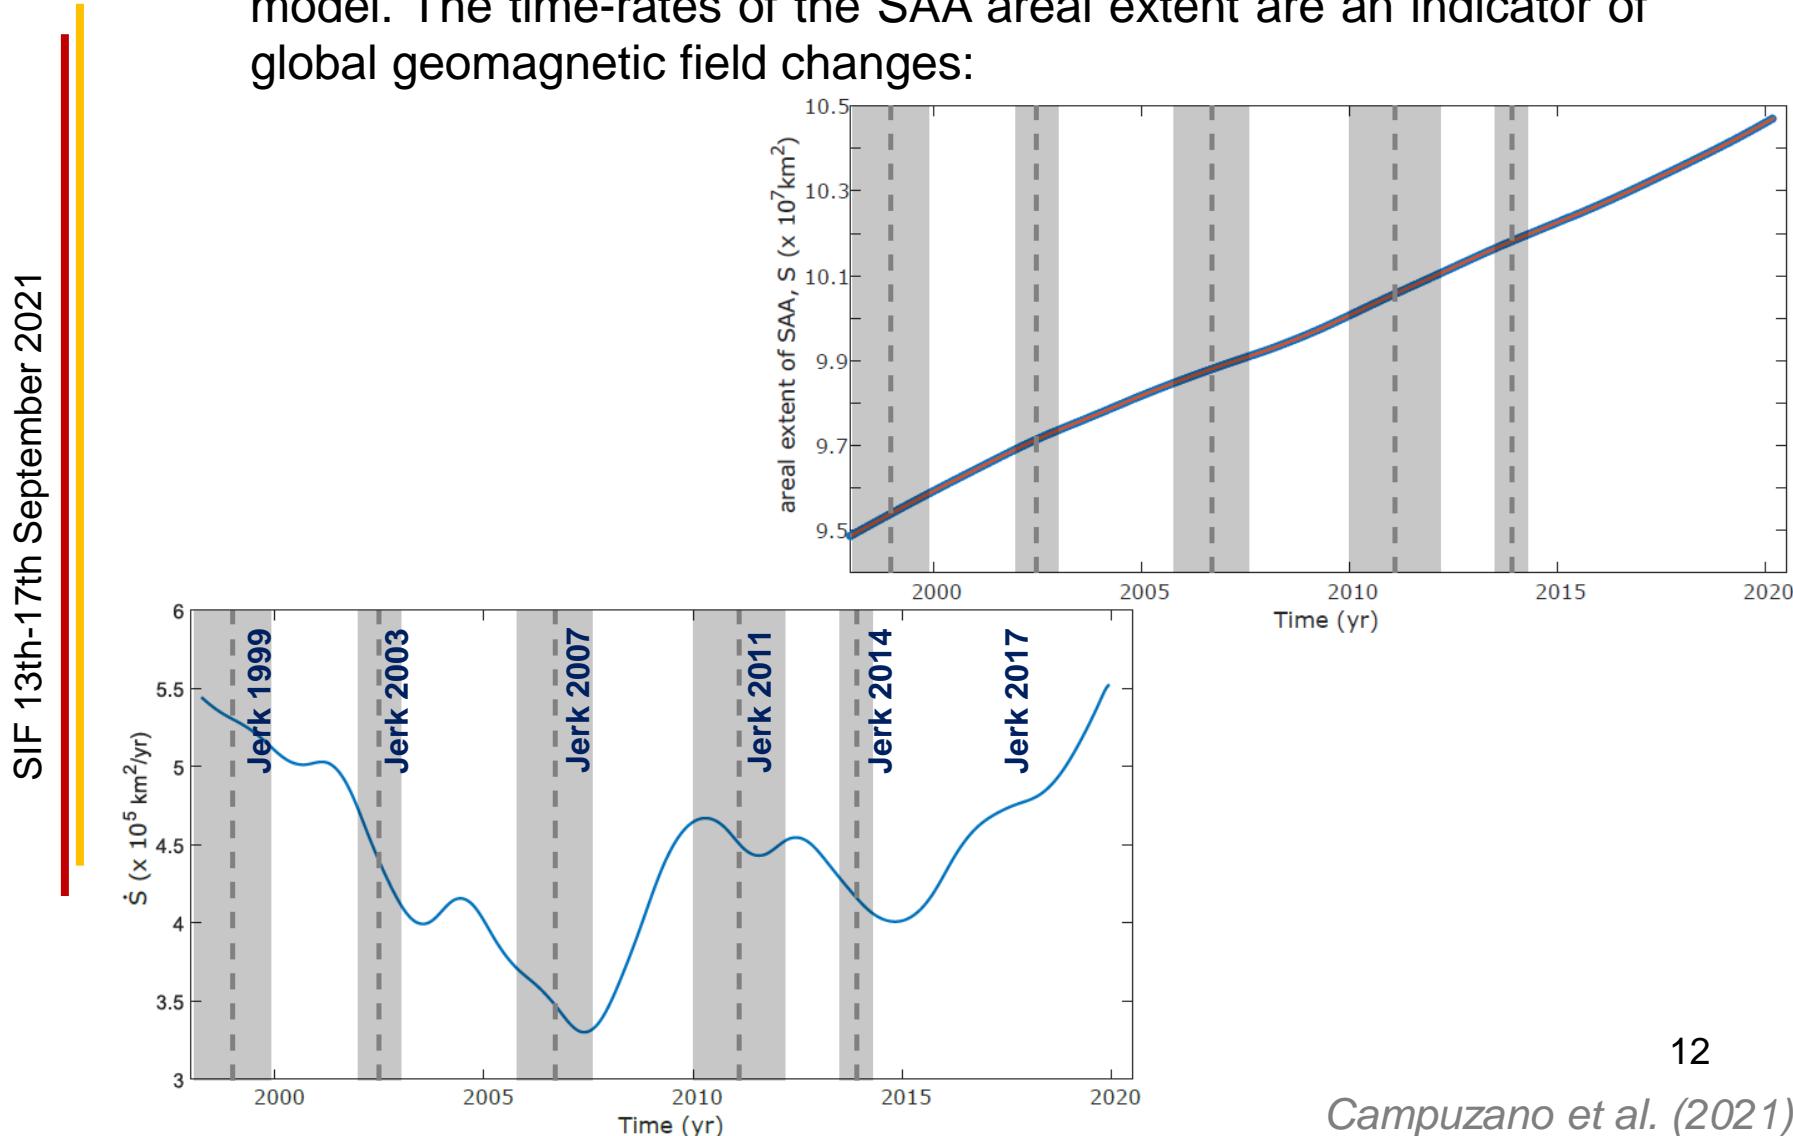

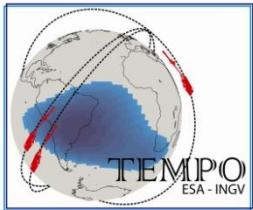

SIF 13th-17th September 2021

5. SAA – geomagnetic jerks

Areal extent of SAA and first time derivative using the CHAOS-7.2 model. The time-rates of the SAA areal extent are an indicator of global geomagnetic field changes:

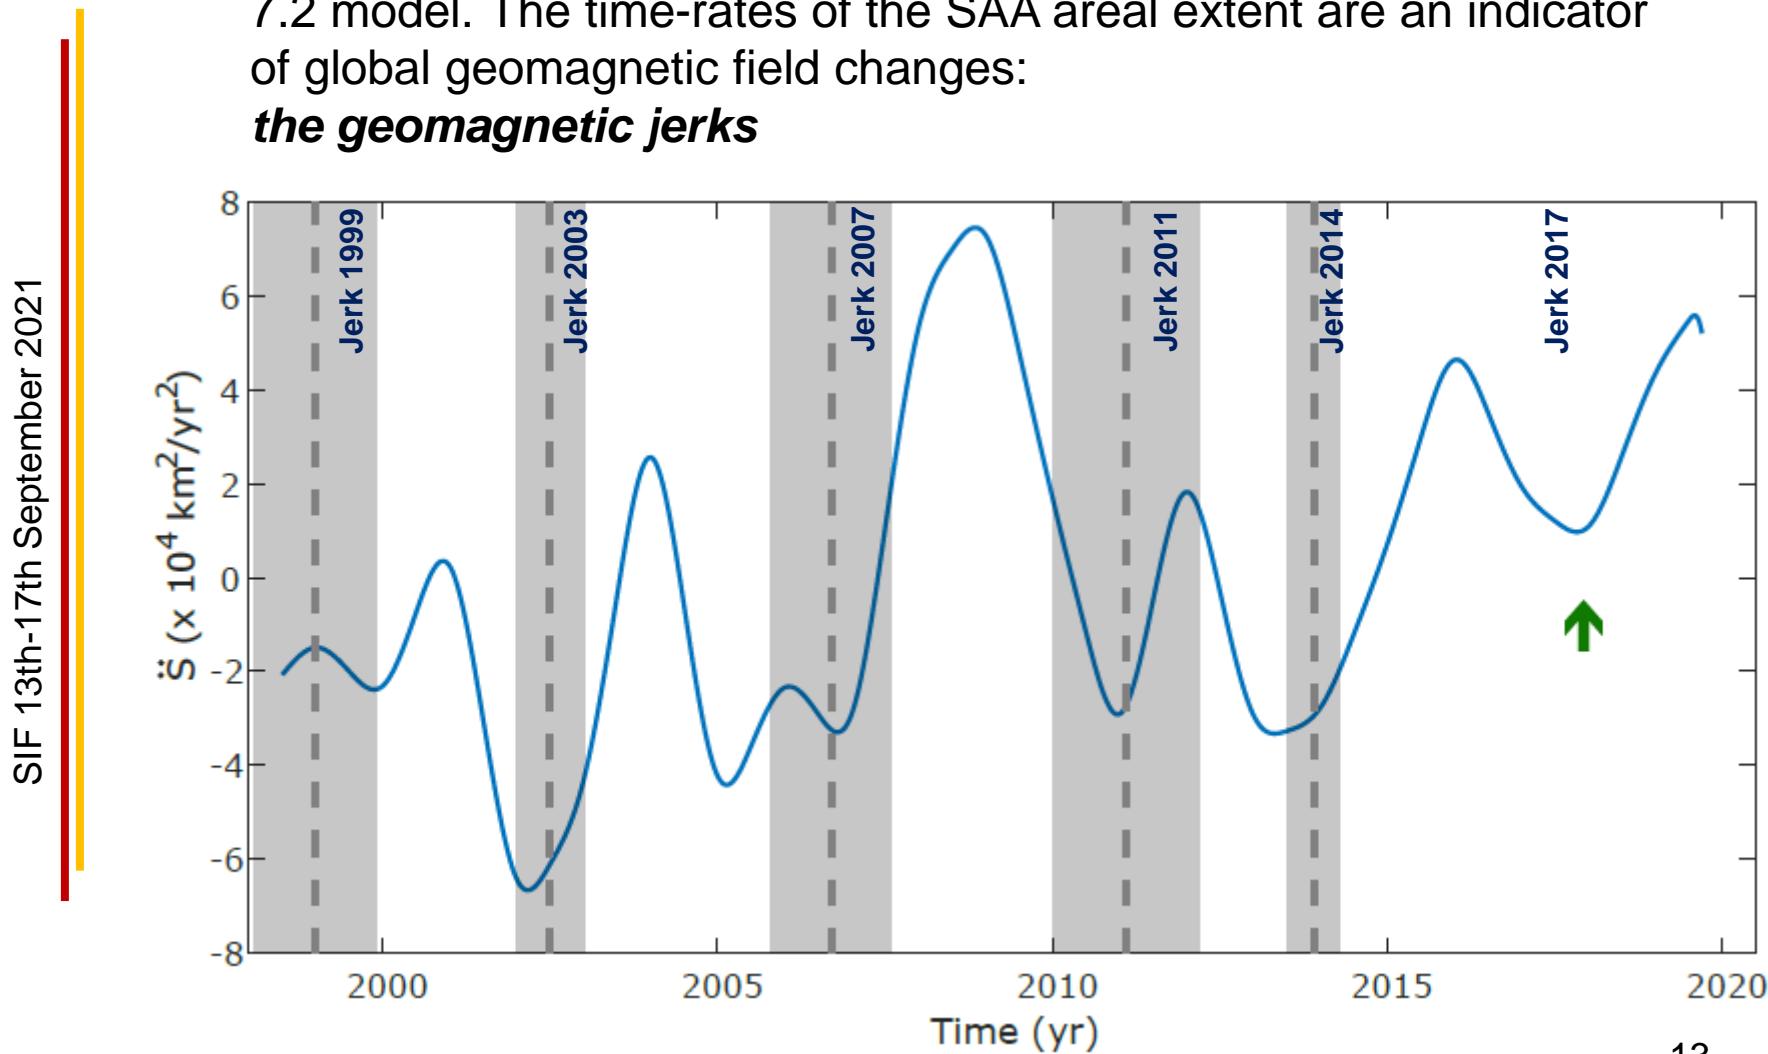

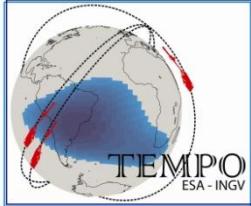

5. SAA – geomagnetic jerks

Second time derivative of the SAA areal extent using the CHAOS-7.2 model. The time-rates of the SAA areal extent are an indicator of global geomagnetic field changes:

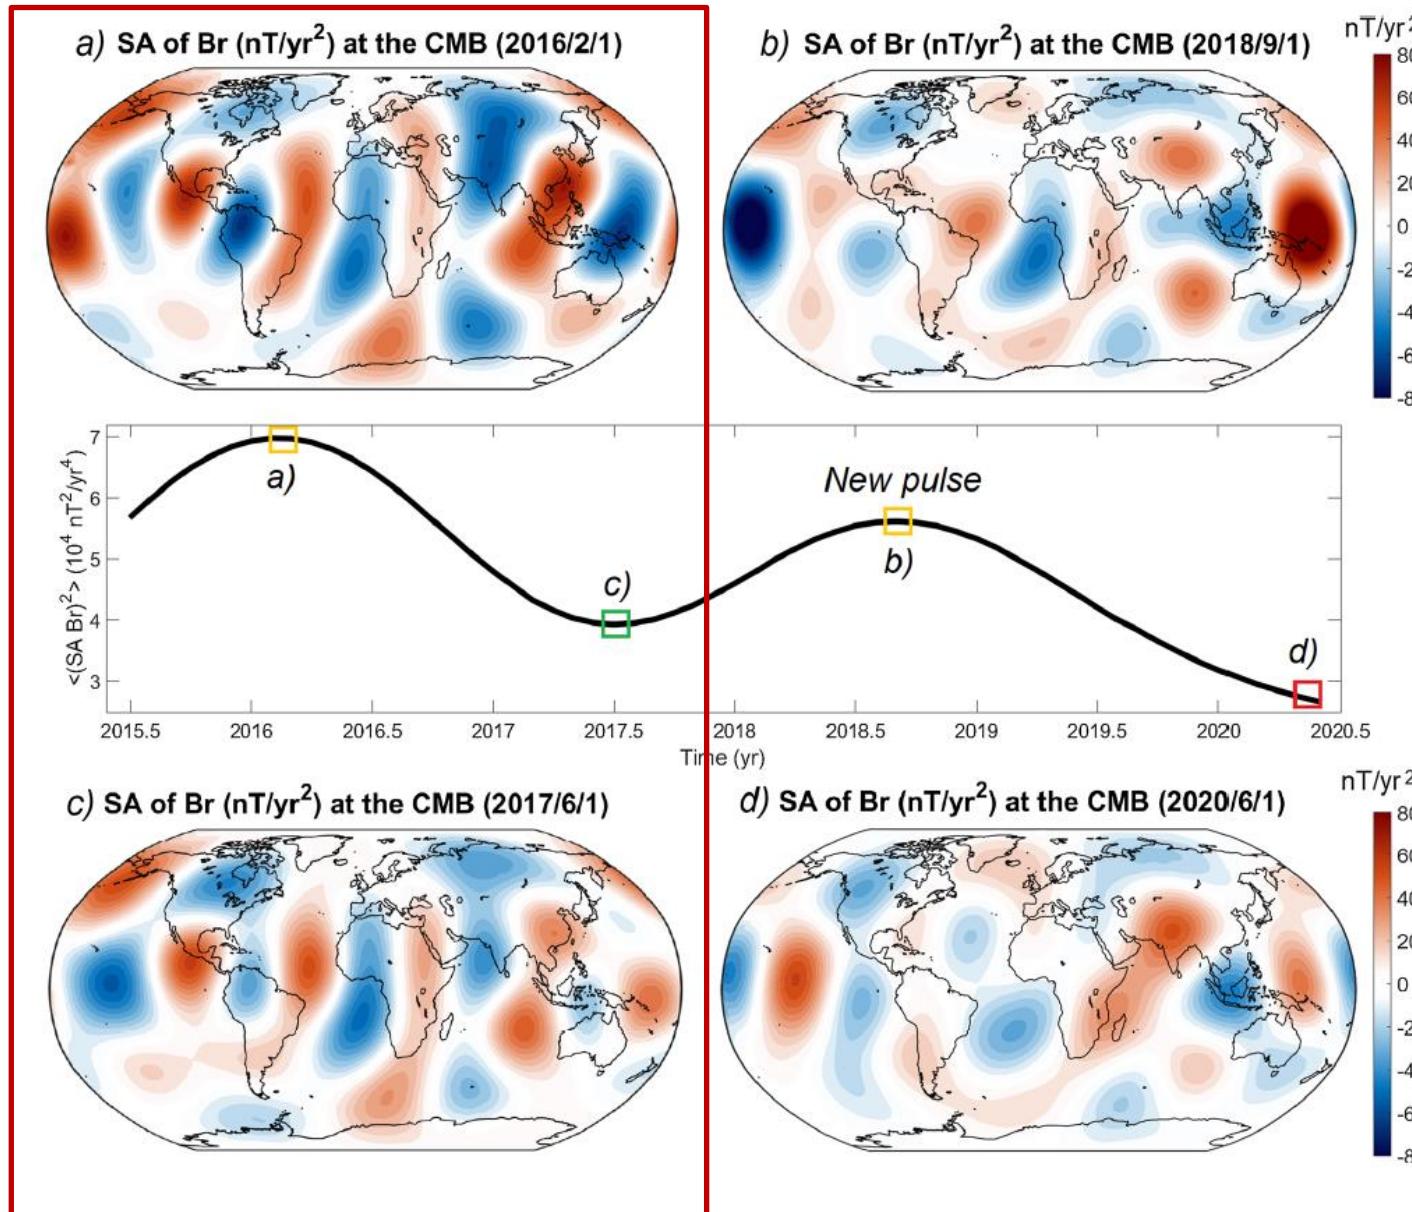

the geomagnetic jerks

5. SAA – geomagnetic jerks

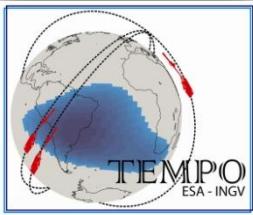

SIF 13th-17th September 2021

6. New geomagnetic jerk!

New jerk observed between 2019-2020!!

Pavón-Carrasco et al.

FULL PAPER

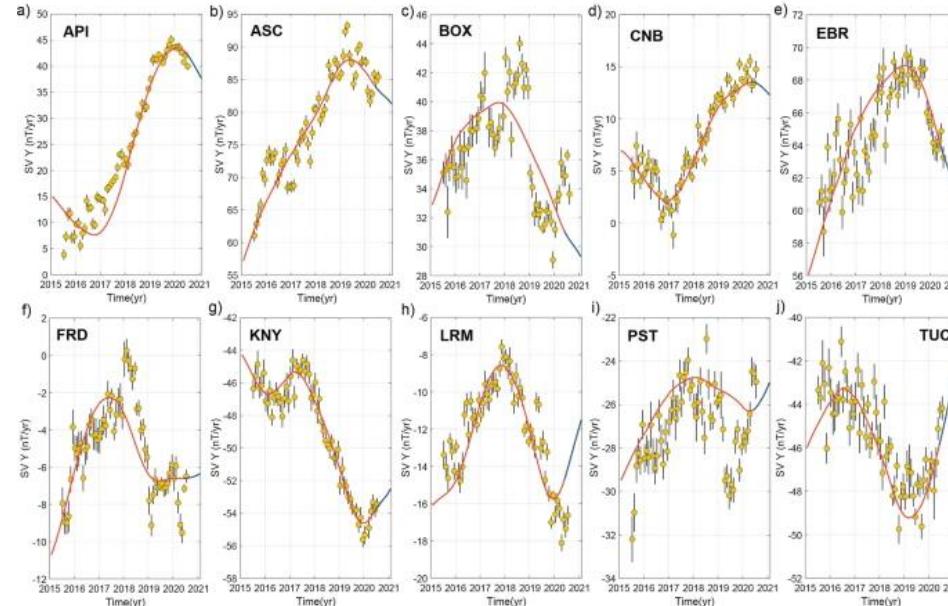

Open Access

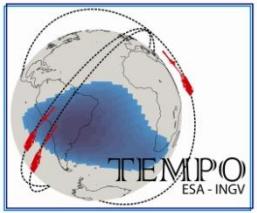

Signs of a new geomagnetic jerk between 2019 and 2020 from *Swarm* and observatory data

F. Javier Pavón-Carrasco^{1*} , Santiago Marsal² , Saioa A. Campuzano³ and J. Miquel Torta²

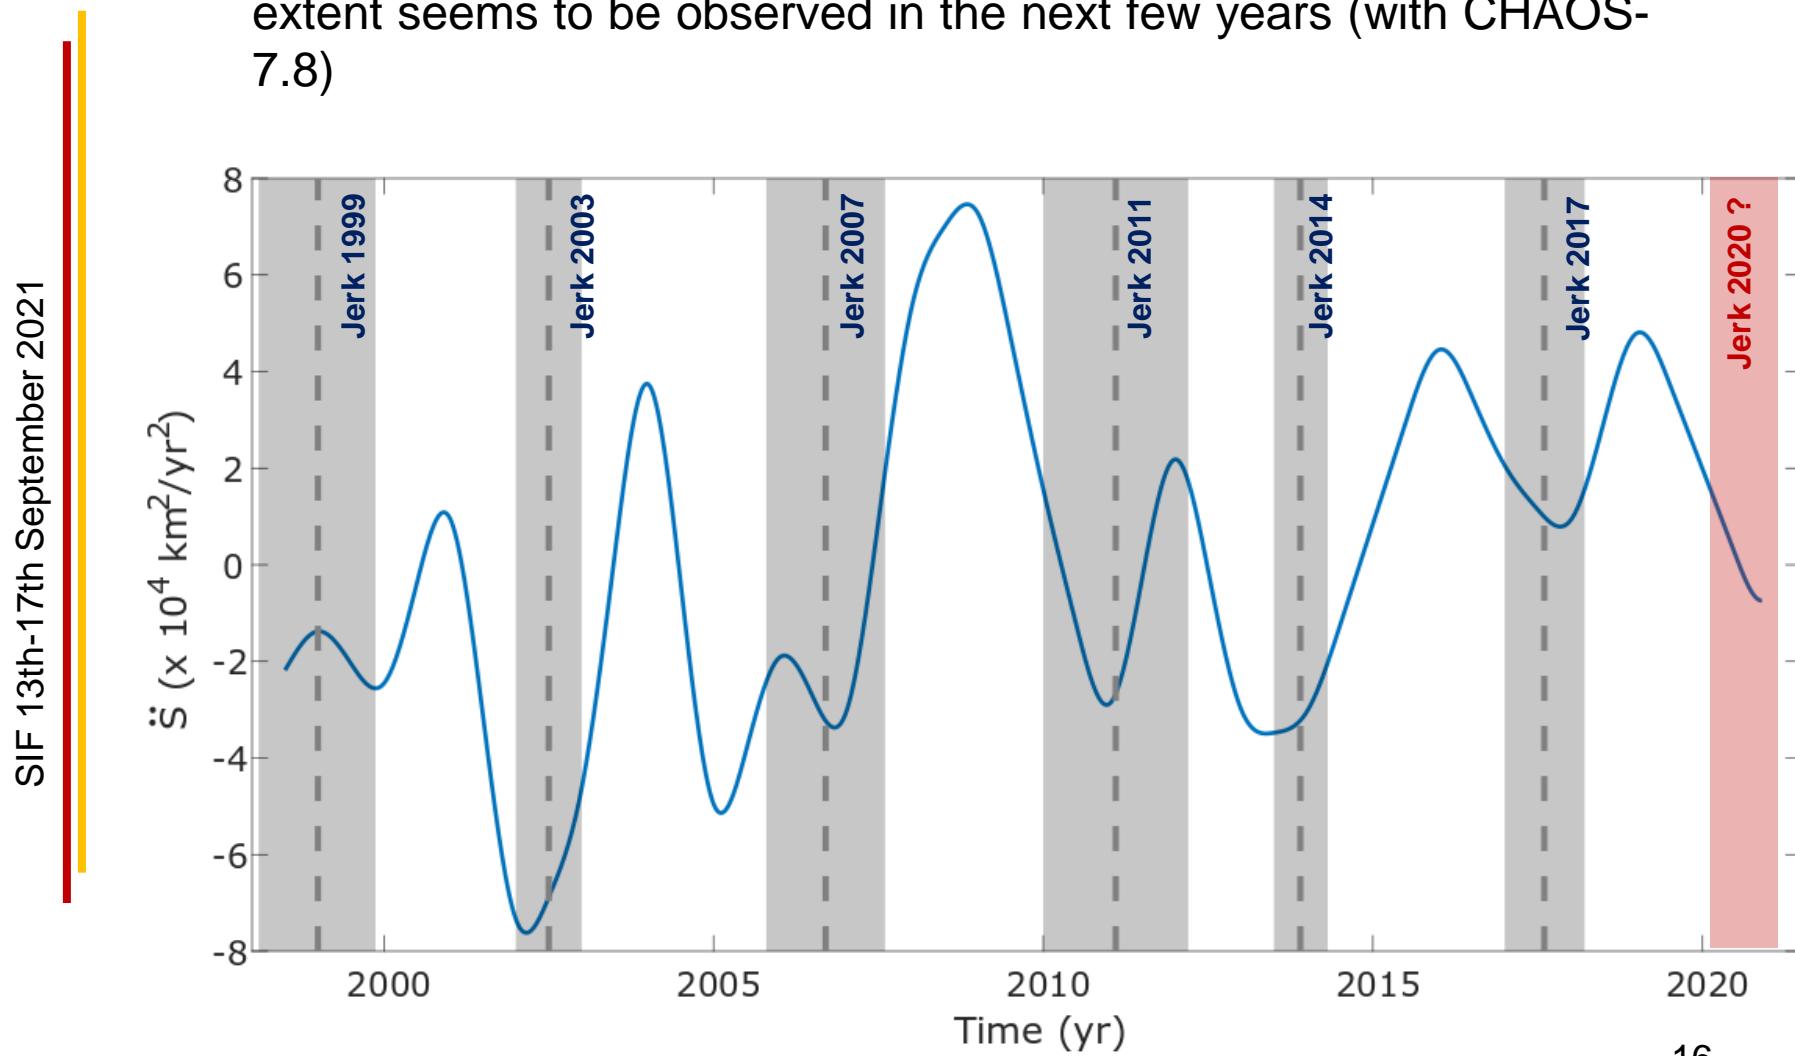

Signs of a new geomagnetic jerk between 2019 and 2020 from *Swarm* and observatory data

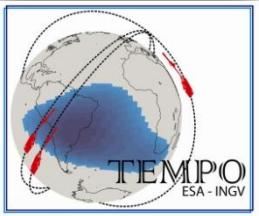

6. New geomagnetic jerk?

A new minimum of the secular acceleration of the SAA areal extent seems to be observed in the next few years (with CHAOS-7.8)

7. Conclusions

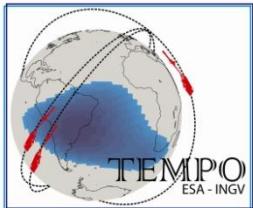

- South Atlantic Anomaly areal extent acceleration minima indicate geomagnetic jerks for the satellite era
- Link indicates a dynamic instability in the Earth's core at the origin of geomagnetic jerks

Alfvén waves and RFPs?

Jerk origin: Kloss and Finlay (2019), Aubert and Finlay (2019)

- The new geomagnetic jerk is indicated

This presentation is based on:
